SIBO AND H. PYLORI ELIMINATED WITH THE UNIVERSAL ANTIDOTE (CHLORINE DIOXIDE)

Editors note: SIBO is "Small Intestine Bacterial Overgrowth."

> *"Hello, I want to share a testimony about my story with CDS.*
>
> *I had methane (imo) SIBO & Helicobacter Pylori, but within 2 months of Protocol C & not even a month doing Protocol E, which turbo charged the eradication, I have eradicated both.*
>
> *I can now eat different kinds of food where before I was down to 3 foods, which was simply unbelievable.*
>
> *Though the SIBO caused vitamin deficiencies, which I'm still battling, I still have gastritis, but it has decreased in pain and is less frequent.*
>
> *I feel my digestive system getting stronger each passing day & I'm still sticking with both protocols C & E. Thank goodness for this yellow gold liquid which is a life saver & thank you to all the admins who run an absolute superb channel. Wow!* 😊*"*

Editors note: This person's SIBO was diagnosed using a lactulose breath test.
